

CLINICAL BIOMANUFACTURING & BIOANALYTICAL SERVICES IN TEXAS

Flexible, responsive, customized services for taking a program from R&D into the clinic, using American facilities and American-sourced materials and equipment.

Our bioanalytical and biomanufacturing services accelerate product development timelines from preclinical evaluation, to first-in-human studies and beyond, to support of commercial manufacturing programs. By integrating on-site bioassay and analytical method development, process development, cGMP manufacturing, and QC lot release testing, we efficiently assemble client-specific bioanalytical and manufacturing solutions that enable a faster path to clinic and product commercialization.

Work With Us.

cGMP Biomanufacturing Facility

Clinical biomanufacturing for preclinical, clinical scale, and limited commercial-scale biologics.

San Antonio, Texas

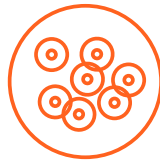

Bioanalytical and Biomanufacturing Capabilities

Bioassays for CMC Support

Microbial Fermentation

Mammalian Cell Culture

Protein Therapeutics

Clinical Trial Support

Facility Designed for Maximum Flexibility and Efficiency

~2,000 sq. ft.

of analytical development space

~8,600 sq. ft.

of total cGMP-compliant cleanroom manufacturing space

500 L

scale capabilities for mammalian and cell-therapy based products

200 L

scale capabilities for microbial-based products
